

DRYWALL TAPING TOOL & INTERNAL APPLICATOR

tools

FINALLY! A package containing the DELKO Plastic Taping Tool and the DELKO Internal Applicator Attachment. This package enables the contractor to finish flat joints, internal angles and square set with ONE Taping Tool.

- NO MORE pre-cutting of paper tape
- NO MORE folding of paper tape
- NO MORE applying mix to internals
- NO MORE embedding of the paper tape

Simply remove the flat joint roller assembly from the banjo and slot in the internal corner attachment for the perfect internal angle finish. Just as for the flat joints, the attachment applies pre-coated paper tape, rolls and embeds the tape, all in ONE quick action. The advantage of the new attachment is that it finishes the internals and square setting at a perfect 90 degree angle – NO BUBBLES – FLAWLESS.

Applying paper tape to flat joints and internal angles can now be performed with the one taping device with two attachments making it the cheapest option by far.

This really is the EASIEST – QUICKEST – CHEAPEST way of finishing internals and square setting.

The PACKAGE is available through Authorised Distributors ONLY.

To watch a demonstration video of the attachment in use check out:
