### NAMCP03 - GALVANIZED METAL SHEET COUNTERFRAME FOR SLIDING DOORS PLASTERBOARD TYPE

#### PRODUCT DESCRIPTION

Counterframe entirely in high quality galvanized sheet metal, with high resistance to rust and corrosion.

The vertical frets on the side panels make the whole structure rigid, sturdy, completely self-supporting and suitable for fixing plasterboard using a screw. The upper crosspiece is composed of a sturdy aluminum track and is completely removable to facilitate assembly that takes place without the use of screws or nails. To ensure perfect smoothness, stability and silence in all our counterframes, there are 80 kg capacity trolleys with ball bearings and nylon wheels, door stop and lower door guide in nylon. All types are available in all standard sizes in widths from 60 to 120 cm. However, it is possible to quickly deliver even oversize products in both height and width.

The counter frames are suitable for plasterboard with 75 mm, 100 mm uprights (codes with the final "B") and masonry (final code "M"). Finished wall 100 mm

Two single subframes can be assembled together to create a double model, using a special joint bracket.

N.B. In the "door light" item, the space of the trims is not considered, space that must be calculated when the door is made.
